

DuraSeal Exhaust clamp

*Provides a serviceable joint
For high durability requirements*

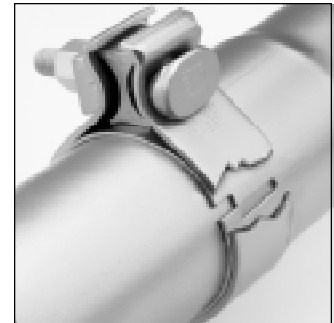

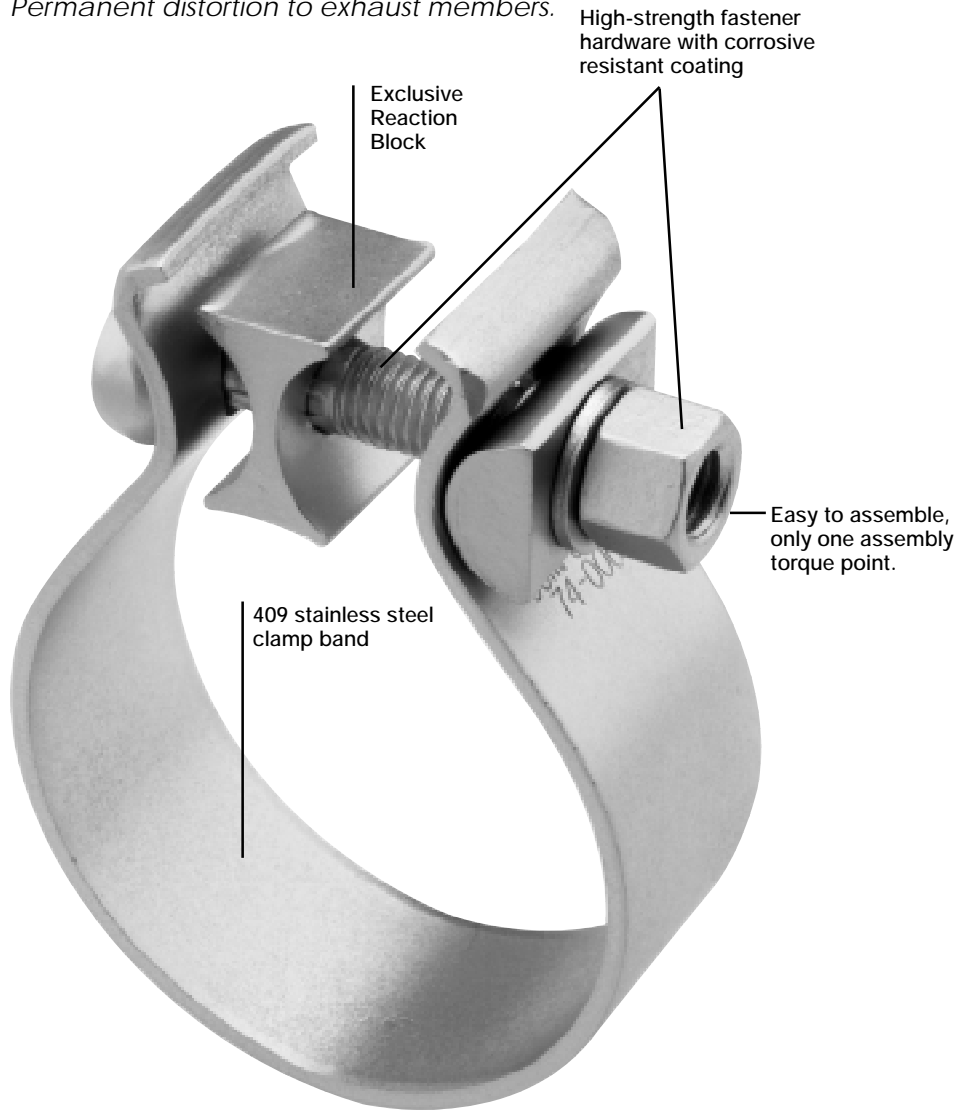

The simple, effective way to connect exhaust system components. Pipes, mufflers and converters.

Extra seal and clamp load performance to meet

Or exceed durability requirements without

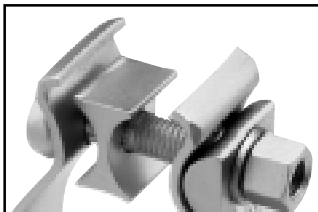

Permanent distortion to exhaust members.

DuraSeal, with Torca designed slots, provides optimal seal and joint retention performance.

- Available in standard size from 50mm (2") to 89mm (3 1/2").
- Improved clamp performance for applications with thicker pipe walls and larger pipe assembly gaps.
- Ideal for applications with limited packaging space. One assembly torque point.
- Unique fastener system efficiently converts band tensile strength into high clamp loads.
- The reaction block provides a full 360° equal distribution of stretching force, prohibiting a pipe distortion while completing a seal around the joined exhaust components.

Unitized assembly . No Loose Hardware. Slides into place, installs easily and reliably.

Preattached to outside tube for part-in-assembly shipment to vehicle assembly plant.

The Reaction Block transfers bolt torque into clamp strength and an assured seal.
